TRUSTEES' REPORT.

To his Excellency the Governor, and the Honorable Council.

THE Trustees of the Worcester Lunatic Hospital respectfully submit their Forty-eighth Annual Report, and invite attention to the fuller and more detailed reports of the Superintendent and Treasurer, which are herewith transmitted.

There were remaining in the hospital, at the close of the last official year, 490 patients, and there have been received during the year 233; making a total of 723 who have been under treatment. Of these, 41 have recovered; 20 have been discharged much improved; 32 improved; 50 not improved; and 47 have died. There are remaining 533. The daily average number under treatment, for the year, has been a small fraction less than 504.

The average weekly cost of maintaining each of these persons, excluding all "extraordinary expenditures," has been \$3.62, and, including such expenditures, has been \$4.39.

Either sum largely exceeds the amount received from the Commonwealth and from cities and towns for the support of the insane poor; and the deficit, which in the aggregate is a large sum, has been made up this year, as always heretofore, from the contributions to the general fund made by those patients and their friends who pay more than the actual cost of board.

Under the title of "extraordinary expenditures" are included several important items of an unusual and excep-

tional nature. One of these is the payment of the "John Bartlett note and interest." The history of this note (which was given for land), and the reasons for delaying its payment, have been often stated in previous reports. Those reasons have been removed during the present year by the death of the holder, and the Trustees have paid it out of the surplus funds of the hospital.

Another similar item is the payment of \$733 for the "Polly Tucker estate." This "estate" was a small lot of land, with a building upon it, at the corner of Belmont and Plantation Streets, the purchase of which was considered necessary to protect the interests of the hospital. The price paid was the appraisal of the property by three disinterested gentlemen, to whom the matter was referred by mutual agreement between the Trustees and the owner.

Still another expenditure of an extraordinary kind is that of \$16,594.68 for extraordinary improvements. This expenditure principally represents the expense of finishing off and furnishing the homicidal ward, and the fourth story of the building, for the reception and accommodation of patients. This work has been going on for several months, and is now rapidly approaching completion. When it is done the hospital will furnish ample accommodations for 650 inmates, thus adding largely to its present capacity, and increasing its usefulness to the State. It also includes the expense of permanent improvements which have been made upon the farm and grounds; the cost of erecting the windmill for pumping liquid sewage upon the garden and lawn; and the expense of building summer-houses for the patients in the pleasure-grounds.

All of these "extraordinary expenditures" might properly have been made out of the original appropriation, provided by the legislature for the purchase of land and the erection of buildings; but, as the Trustees' account with that appropriation had been for a long time practically closed, it was thought best to make them from such funds as had from year to year accumulated from current receipts. It will be observed that in doing this the surplus of the hospital has been reduced by some \$11,000 or \$12,000. The work will be completed by drawing still further from the same sources.

Early in the present year, Mr. Daniel W. Bemis, who had

been for many years an efficient officer, resigned the position of steward, and left us. His place was filled by the election of Mr. Clarence Buffinton to the vacant office. This made a vacancy in the office of clerk, which was filled by the appointment of Mr. J. W. Brigham of Fall River.

On the 1st of September, Dr. E. Q. Marston, for several years assistant physician, tendered his resignation, and on the 1st of October closed his connection with the hospital. The vacancy thus created was filled by the choice of Dr. Walter P. Bowers of Lancaster, Mass., who has already entered upon his duties.

The year closes with the hospital in a highly prosperous condition. Its affairs have been conducted with harmony and success, and in a spirit of mutual confidence and respect on the part of officers and Trustees.

The manner in which Dr. Park has discharged the difficult and important duties of superintendent demands and receives our highest commendation. To his intelligent and efficient management is due, in great measure, the present prosperity and usefulness of the institution.

THOMAS H. GAGE.

ALBERT WOOD,

Ост. 1, 1880.

Treasurer.

Worcester, Mass., Sept. 30, 1880.

The Treasurer's statement of expenditures for the year ending Sept. 30, 1880, has been this day carefully compared with the vouchers which are on file at the hospital, and found to be correct.

The securities for the invested funds have been also inspected, and found to correspond with the Treasurer's statement of their market value.

THOMAS H. GAGE,

Auditor of Accounts.

SUPERINTENDENT'S REPORT.

To the Board of Trustees of the Worcester Lunatic Hospital.

Gentlemen, —The year which has just closed has been marked by no unusual event which distinguishes it in a signal manner from the previous ones in the history of the hospital. The new building has now been occupied three years, and the experience of each successive year gives proof of the thoroughness of its construction and the general convenience of its appointments. The wards are particularly sunny and cheerful, and are rendered more attractive from time to time by the addition of pictures and the painting of the walls.

There were remaining in the hospital Sept. 30, 1879, 235 males and 255 females,—a total of 490. The number of admissions since has been 103 males and 130 females, making the whole number under treatment 723. The number of admissions, 233, represents 222 persons,—88 more than were admitted last year; ten being re-admissions of persons who had been discharged during the year, and one simply a transfer from private to State account.

Forty females and five males were transferred from the Danvers Lunatic Hospital, and four females from the State Almshouse at Tewksbury.

Eight convicts have been transferred from the State Prison at Concord.

The number of recoveries has been 41; 12 of whom had been inmates of the hospital before and been discharged recovered, one seven times, one four times; and eight, once each. Twenty were discharged much improved. Many of the latter continued to improve after their discharge until they were fairly recovered, and would have been so tabulated had they remained longer in the hospital. There has been

but little sickness among the inmates; the number of deaths being 47,—30 men and 17 women.

The whole number discharged has been 190, —105 men and 85 women; and the number remaining in the hospital Sept. 30, 1880, was 533,—233 men and 300 women. A part of the statistics in the present report has been prepared to fill blank forms suggested by the Board of Health, Lunacy, and Charity. These forms have been sent to all the State hospitals, and, if adopted by them, will be the means of simplifying and rendering uniform the statistical information furnished by the insane in the institutions under State supervision.

Your especial attention is called to the very valuable tables referred to in my last report to the Board as in process of compilation. These have been completed, and include all the cases admitted to the hospital since its opening, and give, so far as it was possible to obtain it, the hospital history of each patient, including the number of times admitted to the hospital, and the number who upon discharge from the hospital were sent to institutions of a similar character both in this and other States.

From a study of this table we learn, that of a total of 12,401 cases admitted from Jan. 19, 1833, to Sept. 30, 1880, 3,155 were re-admissions, and that 1,316 persons had previously been inmates of other hospitals, and 1,195 upon their discharge were removed from this to other hospitals. It is not probable that the statistics of the other State institutions would furnish more encouraging information as to the permanent recovery of insane persons from their malady. In fact, it is owing to the temporary duration of their recoveries, rendering necessary a re-commitment sooner or later to the hospitals again, that the State institutions are becoming crowded with a class of patients who have passed into the chronic and incurable stage of the disease. Although the State within the last eight years has provided, at an expense of nearly \$3,000,000, for the accommodation of about 1,300 insane persons, the full capacity of these institutions will probably be reached before the end of another year, and the necessity of making further provision for this class of defectives will be apparent.

Several solutions of this problem have been suggested, all of them having for their object the removal of the chronic

insane from the State hospitals to make room for the acute and curable who can be benefited or restored to health by hospital treatment. It is known that at all of the hospitals there are a certain number of inmates who are able to do some useful labor under the guidance of the hospital employees, and in some of them the amount of assistance thus rendered is of material benefit. It is proposed to remove this class to families about the State who would board and clothe them for their labor.

A second plan is to exert some pressure upon the friends of the harmless insane, to induce them to care for these dependent members of their families at home.

A third plan is for the cities and towns to provide for them at the almshouse.

To the first plan it may reasonably be objected, that, even if in our thrifty towns families could be found to take one or more chronic cases, they would be scattered over so much territory that any effective supervision by State officials would be impracticable; and without such supervision the profit derived from the spasmodic and intermittent labor of the insane thus farmed out would soon be found so small that the patients would be likely to suffer from some form of neglect.

While it may be true that some families are able to spare from their income or their means enough to support an insane relative now a town or city charge in one of our hospitals, I think it is the experience of every one who has been brought into intimate relations with the friends of poor patients, that as a rule they manifest no desire to shirk the burden of their support, but that they assume it as an imperative duty, involving oftentimes the most rigid economy and self-denial.

The adoption of the third expedient would be but a return to the condition of things which existed before this hospital was built.

The story of the failure of the plan of almshouse treatment of the dependent insane, told to legislative committees, has probably been the most potent of any of the arguments used in securing appropriations for the construction of two-thirds of all the State hospitals for the insane in this country. This story need not be repeated here.

Should the almshouse again become the receptacle for the insane, there is no reason to suppose that the step would be any more successful than it has been in years gone by. The only exceptions which might perhaps be made would be of a few cases of cities where additions have recently been made to their almshouses for the special care and accommodation of the insane.

Neither of these three expedients for relieving the existing hospitals of the class of patients who have passed into the incurable stage of their malady seems satisfactory. The problem, however, is one which must be solved in some way, and that too in the near future.

I know of no better way than for the State to erect buildings especially for this class, either as additions to some of the present hospitals, or, what would be much better, in my judgment, to build an independent establishment in some quiet agricultural district east of Worcester County.

The experience of another year in the disposal of the sewage of the institution by irrigation confirms the opinion expressed in the last report on the advantage of utilizing it in this manner.

The windmill has been in use both night and day in pumping a portion of it upon the lawn in front of the building, and has required no repairs.

The improvement of the hospital-grounds has been continued. A summer-house of graceful proportions has been built in the grove west of the institution. The estate upon both sides of Plantation Street has been enclosed by substantial stone walls.

A small lot of land at the junction of Shrewsbury and Plantation Streets has, since the death of its owner, Polly Tucker, come by purchase into the possession of the hospital. This piece of ground was nearly covered by a dilapidated building, which will now be removed.

A great deal of work has been done on the farm, a list of the products of which is appended to this report.

At the close of the last year two sections of the fourth story were nearly ready for occupation. These have since been occupied, and the work has been continued in other sections of the same story, until, in a few months, the hospital will have ample accommodations for 650 patients. Of the 26 wards, the walls have been painted in 16.

On the 1st of January Mr. Daniel W. Bemis resigned the office of steward, and Mr. Clarence Buffinton, for some years clerk, was appointed to the office. Mr. James W. Brigham was chosen to fill the vacant clerkship.

On Sept. 1 Dr. Enoch Q. Marston resigned the office of first assistant physician, and Dr. Walter P. Bowers was appointed to fill the position. Mr. F. M. Knapp, jun., has, since the 1st of April, successfully managed the farm.

In conclusion, I desire to acknowledge the hearty cooperation of the officers and employees of the hospital, who with few exceptions have, I believe, worked faithfully for the best interests of the institution.

For your continued advice and encouragement I am under renewed obligations.

JOHN G. PARK,

Superintendent.

WORCESTER LUNATIC HOSPITAL, Oct. 1, 1880.

PRODUCTS OF GARDEN AND FARM.

Apples.	•						1,800	barrels
Asparagus							$6\frac{1}{4}$	bushels
Beet-greens						1.	$3\frac{1}{2}$	bushels
Beets .							1411	bushels
Beans, shell							89	bushels
Cucumbers							65	bushels
Cauliflower							152	pounds
Currants							29	quarts
Cabbage							3,573	heads
Carrots							722	bushels
Corn, sweet							18,282	ears
Celery .	•						4,151	heads
Cantaloupes							270	
Egg-plant			• ·				32	
Gherkins							1	bushel
Lettuce							2,196	heads
Leek .							3,050	
Onions.							$27\frac{1}{2}$	bushels
Okra .							$2\frac{1}{2}$	bushels
Parsley							25	bushels
Pease .							$68\frac{1}{4}$	bushels
Parsnips							$205\frac{1}{2}$	bushels '
Peppers							4	bushels
Pumpkins							586	pounds
Potatoes							240	bushels
Pop-corn							10	bushels
Rhubarb							35	bushels
Radishes							8,815	
Squashes							1,647	
Squashes, w	inter						16,116	pounds
String-beans	3		4				28	bushels
Spinach							$69\frac{1}{2}$	bushels
Sage .							1/2	bushel
Salsify.							12	bushels
Strawberries	3						595	quarts
Turnips							$21\frac{1}{2}$	bushels
Turnips, rut	a-bag	ga					1,265	bushels

Tomatoes .					2224	bushels
Whitloof .					11/3	pecks
Mangel-wurzel be	eets				600	bushels
Hay					110	tons
Stock and swale l	hay				30	tons
Rowen					20	tons
Fodder-corn .					50	tons
Rye-straw .					12	tons
Rye for fodder					8	tons
Oats in straw					11	tons
Buckwheat-seed					100	bushels
Rye-seed .					140	bushels
Milk					104,341	quarts
Pork	•.				12,938	pounds
Beef					5.058	nounds
